"One never steps into the same river twice" Heracletes

"Toto, I've a feeling we're not in Kansas anymore. .We must be over the rainbow." Dorathy in the Wizard of Oz.

Santayana

Oliver Wendall Holmes

Our subject is the practice of money, banking and finance along with the determinants of the character of the performance of the economy and society.

The last years of the 20th Century are a time of revolutions:

in computing, controlling data and instantaneous global communication,

in the former Socialist economies which are in transit to either capitalism, communism or choas,

in the rich capitalist economies which are not now performing up to the standards established in the third quarter of the century, during which the benefits of economic progress were widely distributer through the land,
which need to confront the possible break downs of the monetary and financial system which reigned through the successful era.

Use the credit, charge and debit card material as well as the securitization material and the explanation of the behavior in an era of rapid institutional change and heightened uncertainty of a financially sophisticated monetary production economy.

Introduction.

1. The framework.

The reader will better appreciate what follows if the argument starts with an explicit statement of the authors priors. Our aim is to establish the conditions that lead to a successful monetary production economy. In order to do this we first have to make precise the attributes of a successful monetary production or capitalist economy.
