Removing black-legged tick (*Ixodes scapularis*) Haller’s organs affects their ability to detect a carbon dioxide gradient.
ACKNOWLEDGEMENTS

I would like to express my deep gratitude to my senior project advisor, Professor Felicia Keesing without whose continued patience and guidance, this project would definitely not be possible. Thank you to Melissa Yost for collecting, and performing surgery, on the ticks I used for this project. I would also like to extend my thanks to the technicians of the biology department laboratory for their help in obtaining the resources needed for my study. Thank you to my friend Shania for being a constant source of motivation and helping me through all of the late nights. And finally, I wish to thank my family for their unwavering encouragement and love over the years.
TABLE OF CONTENTS

1. Abstract .................................................................................................................. 1

2. Introduction ............................................................................................................. 2
   2.1 Tick-Associated Human Diseases .................................................................... 2
   2.2 Life Cycles, Seasonality and Host-Seeking Behavior ...................................... 3
   2.3 Effects of Climate Change ............................................................................. 5
   2.4 Carbon Dioxide Detection ............................................................................. 5
   2.5 Haller’s Organs ............................................................................................ 7
   2.6 Current Study and Hypotheses ..................................................................... 9

3. Methods ................................................................................................................. 11
   3.1 Tick Collection and Storage ....................................................................... 11
   3.2 Haller’s Organ Amputation ......................................................................... 11
   3.3 Behavioral Assay - Carbon Dioxide Detection Test ................................... 12
   3.4 Data Analyses ............................................................................................. 13

4. Results ................................................................................................................... 14
   4.1 Haller’s Organs and CO₂ Treatment ............................................................ 14
   4.2 Time Moving and CO2 Treatment ................................................................. 14
   4.3 Time Moving and Haller’s Organs ................................................................. 14
   4.4 Days Post Surgery and Haller’s Organs ......................................................... 15

5. Discussion .............................................................................................................. 16
   5.1 Haller’s Organs and CO₂ Detection .............................................................. 16
   5.2 Effects of Carbon Dioxide .......................................................................... 17
   5.3 Effects of Surgery Date ............................................................................... 18
   5.4 Future Directions ....................................................................................... 18
